

Application Testing

Rave Technologies – Your trusted partner for application testing

Rave Technologies’ testing services are offered as a seamless extension to our customer’s in-house IT and business testing capabilities. We work closely with our customers to tailor test strategies that meet their requirements, ensuring top quality level of the systems as desired by our customers. Our services are tailored to help companies test better, faster and at a lower cost.

Organisations are experiencing increasing pressure to operate within limited budgets and yet provide quality products that help them achieve lesser time to market, greater efficiency of operation, and reduce risks. Companies are hence increasingly looking at Outsourcing application testing services to meet these goals.

Working with Rave Technologies will add flexibility and know-how to your quality assurance (QA) and testing capabilities, but most importantly it will ensure your business stays on track.

Our testing team is a group of experienced and skilled testing professionals with expertise in manual

testing, defect management tools, and automated testing tools like QTP, Selenium, Rational Test Suite and performance testing with LoadRunner and license-free tools.

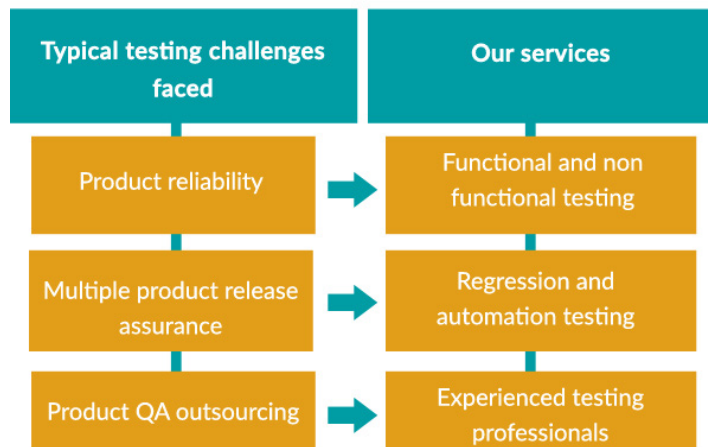

Our testing services include:

- System testing
- Performance testing
- Automation testing
- Cross-Browser testing
- Accessibility testing
- Multilingual testing
- Mobile testing

Our experts formulate a test strategy based on risk analysis, functional understanding & prioritisation. Depending on the customers’ needs and existing maturity of processes, we recommend the most appropriate model for the engagement.

Automation Testing

We offer automation testing using open source and commercial tools with the help of our certified and dedicated team. Over the years, we have helped different clients to get a quick overview of builds through automation. We use test automation model which focuses on ROI, productivity and application stability.

Our automation team has:

- Experience in different domains to identify business critical scenarios and test data modelling for simulation of real-life events
- Expertise on a variety of tools - QTP, Selenium, Rational Robot and TestComplete
- Know-how of functional automation for overnight build verification test and regression test automation
- Capability to minimise test result analysis time achieved through a detailed report generated through automation

Performance Testing Services

The success of any application or website depends upon how it performs in the real world. Performance issues cause severe damage to a company's goodwill and business if they are undetected. We provide complete performance testing solutions to assure the performance of applications or websites in the real world. Over the years, we have helped different clients to validate their application performance. We have devised performance testing model which focuses on an end-to-end assessment of application

performance.

Our performance team has:

- Expertise in performing load test, stress test, soak test, endurance test, spike test on web applications, WCF and web services
- Capability in identifying performance bottlenecks in application and infrastructure
- Expertise in using different commercial and open source load testing tools; to name a few, we have expertise in LoadRunner, Silk Performer, Microsoft Visual Studio Team System-Tester Edition, OpenSTA, WebLoad, and JMeter

Why Us?

- We help the customer's meet their objectives through our extensive and comprehensive application testing capabilities throughout the product lifecycle.
- We offer the requisite infrastructure, proven methodology, meticulous processes and experienced people to execute and manage large testing activities.
- We assist you in defining test methodology for your business processes and streamlining your operations.

Rave Technologies - A Northgate Public Services Company

Rave Technologies – A Northgate Public Services Company, is one of the foremost providers of end-to-end IT solutions to small and mid-sized organisations, predominantly in the Publishing and Technology space.

Rave Technologies' end-to-end product/application engineering services help address challenges in the product or application development life cycle. These services include requirement analysis, software architecture, design, development, testing and maintenance with specialised services in cloud/SaaS migration, usability engineering, system architecture and design, infrastructure management services and application testing solutions.

We have a strong presence across the globe thanks to our parent companies – NEC & NPS. NEC is a multinational provider of information technology (IT) services and products, headquartered in Tokyo, Japan with a turnover of GBP 18 billion in 2017 whereas Northgate Public Services (NPS) is a market leader in software solutions and IT services to local government, public safety and health sectors in Europe, Canada, Australia and India.
